

Device Design Concept Brochure

VELLUM / MED · 2026-09-28 · Original design concepts

This original demo explains design concepts. It is not a real medical device, instructions for use, clinical training, test report or approval/certification record. It cannot be used on patients or as a basis for diagnosis or treatment.

CART ONE / Mobile

A form concept combining a display, angled controls, cable guide, cart and wheels. The illustration explores display height and movement; actual dimensions, power and measurement functions are undefined.

VIEW DESK / Desktop

A concept with a tilted display and separate controls. Lines and shapes are decorative layout elements, not medical signals, patient information or diagnostic results.

LINK BASE / Connection

Modular panels, port shapes, indicator positions and ventilation patterns distinguish connection areas. No connection standard, equipment compatibility or electrical-safety claim is made.

FIELD KIT / Portable

A case concept combining a handle, protected corners, dividers and a display. It provides no actual weight, water or impact resistance, or clinical-use specification.

Document-review checklist

For an actual product, verify manufacturer and model identity, official intended purpose, valid regulatory records, current instructions, operating setting, installation and training requirements, maintenance and support through official supplier records. This demo neither holds nor replaces those records.

Demo inquiry and sources

The form checks institution type, concept model and timing only. It does not send, store or book a session. Do not enter patient or sensitive institutional information. Device images are original SVG illustrations for this template. Setting photographs are separate stock examples, not partner institutions or actual product-use records.
